

Cloud Backup and Disaster Recovery

Seamless business continuity

Clarotech's Cloud Backup and Disaster Recovery (Cloud BDR) is a comprehensive backup and disaster recovery solution for virtual and physical server environments with a focus on full system and data recovery. In the event of a disaster, your server environment can be recovered to the original hardware or to equivalent hardware in the cloud to allow for IT-related business processes to continue.

The Benefits

Backup of data, and full system reduces recovery time and costs

Cloud BDR backs up your entire server environment (including programs, data and operating systems), creating an exact replica of your IT system in the cloud.

Incremental block level backups

After an initial full backup, only daily incremental updates are made to the cloud backup. This ensures that your back up processing time is minimized. No more hours of backing up to tape!

Prompt recovery from on-site backup or restore from the cloud

In the event of a failure data or your entire system can be promptly recovered from your on-site backup or retrieved from the cloud.

Cloud recovery of servers

Disaster recovery is possible with Cloud BDR, as an optional additional service. In the event of full system failure your IT system will be resurrected in the cloud so it is business as usual.

Disaster Recovery Simulations

Disaster recovery simulations are a breeze with Cloud BDR. Simulations are run from the cloud backup without the need for restoring from tape.

Your server environment is protected and retrievable!

✓ Complete

Your entire server environment is replicated in the cloud.

✓ Fast

Disaster recovery uses your existing data backed up in the cloud without the need for restoration from tape.

✓ Secure

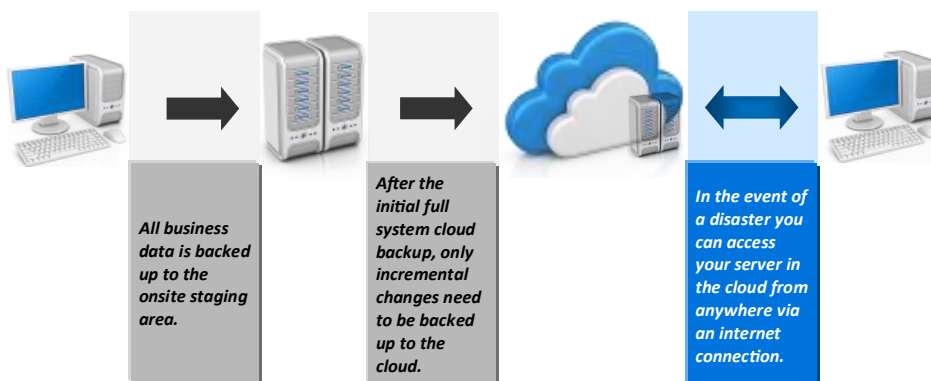

Data backed up in the cloud is stored in a secure Tier 3 data centre.

✓ Reliable

Using cloud backups, your data will be protected without relying on tapes.

✓ Accessible

Your IT system is accessible from anywhere in a disaster situation.
