The Power of Asterisk

Asterisk is the open source telephony software that is transforming the way the world communicates
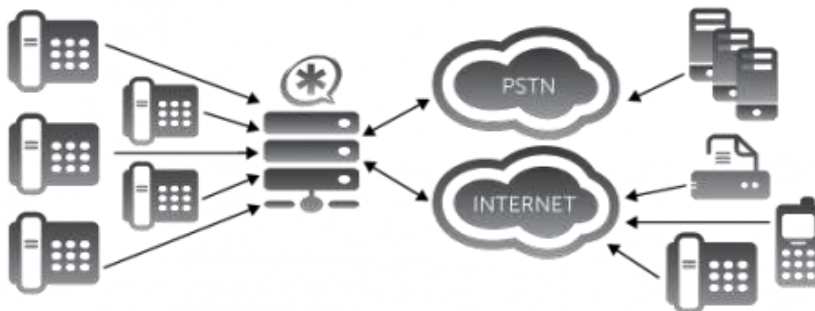

Asterisk®, created by Digium®, is currently the world's most popular open source communications software, with over a million installations in 170 countries.

The beauty of Asterisk is its ability to transform a simple computer into a customised communications system. Businesses are rapidly taking up the advantage of the low cost, vast functionality and supported

With a community of over 90,000 registered users and developers, Asterisk is a living project; created by people on the ground who know what the market wants through their own experiences.

Asterisk is downloaded over 5,000 times a day!

Asterisk is used by most Fortune 1000 companies and rapidly gaining market share in South Africa

The likes of Google, Yahoo, the US Army, eBay and over a million other companies all rely on Asterisk for telecommunications. With reputable support available locally, no wonder South African companies are switching to Asterisk at a faster rate than
